Collaborating

Adobe Framemaker & Documentum

Adobe FM to Documentum Link

Together, Adobe Framemaker and Documentum provide everything that an enterprise organization needs to create, share, reuse and deliver XML content, in any DITA formats, for any destination.

Features

- Security login feature.
- Check In – supporting nested conref, xref, href etc with an option of creating virtual documents as well.
- Check out – supports - all root and descendents, root with read-only descendants, root-only options.
- Full Dita XML support.
- Search content and metadata.
- Lists all documents currently checked out, which can be cancelled as checked out in the repository.
- Extend and configure behavior and workflow for optimizing usability and established processes.
- Customized upon user request.

Benefits

- An easy to use plugin for FrameMaker, can adopt with no or minimal training.
- Provide EMC Documentum content services like security, version control, content life-cycles, workflows, categorizations.
- Advanced search capability to find what you need from a intuitive search view.
- Create DITA XML content with unparallel speed and ease while working with the market-leading enterprise content management system.
- The combination of Documentum's content management platform and "Linked2" plug-in for Adobe Framemaker is its easy-to-use interface that provides tremendous opportunities for content reuse and deliver the benefits of single source publishing and globalized content delivery.
- Lower cost of data communication.
- Improve consistency and quality.
- Reduce translation time and expenses.
- Deliver to multiple DITA formats.
- Get to market faster.
- Maximize user ROI.

Supports

- Conref, xref, href and other reusable capabilities.
- Once located in the repository, virtual documents or XML chunks can be viewed and edited.
- In-line checkout and editing of referenced content.
- Complete DITA XML support.
- Integrate revisions contributed using FM.
- 'Track changes' capabilities.
- Reuse DITA XML chunks and graphics through Documentum's search and insert.
- DITA XML form capabilities facilitating data entry and reuse.
- Rich content such as multimedia, scalable vector graphics or MathML2.

Architecture

- Linked2 communicates between FM and documentum to create virtual documents for the latter so that it allows content referencing.
- No modifications or installations are done on documentum server through the plug-in communicator.
